[SSNVS help](#)

## SSN Verification Results

Employer's EIN:   
 Records Submitted: 1   
 Failed: 1   
 Verified Records: 0

The following table displays your submitted results. The first column indicates if the submitted record verified, failed, or Employee is deceased. The first five digits of the SSN will be masked for verified records and records with a verification results code of 2, 3, 4, or 6.

- **Failed:** Data does not match Social Security Administration's records. Select [here](#) for more information.
- **Deceased:** Data matches Social Security Administration's records, and all records indicate that the person is deceased. For more information, please contact our general SSA information line at 1-800-772-1213 (TDD/TTY: 1-800-325-0778) or your local Social Security field office. Select [here](#) to find the office nearest you.
- **Verified:** Data matches Social Security Administration's records.

# The American Typewriter

How a Young Computer Graphics Person Could Not Understand How to Use a Computer to Forge a Typewritten Document.

It's been some 30 years since we have used typewriters to produce documents. Computers have replaced the typewriter and given us great advantages in document preparation. There is no need to understand the old typewriter. Except when you need to forge a typewritten document.

A computer in the hands of a young person who can create a modern forgery is no match for the old style quirky mechanical typewriter. The forger who produced the Obama Hawaiian Long Form Health Department Birth Certificate may have thought that all typewriter typeface styles were alike. To get his letters he should have assumed that he needed only to match typewritten letters found in the old files of Hawaii birth certificates to scan ... copy and paste into his new document. Those old files should be all alike having been used to produce birth certificates in the 1961 era.

He must have understood that he needed to copy the old typewriter styles and would find them in the files.

But understanding scanners ... he also had to know that scanning a letter "t" one time and using it all over his document would be conviction assured. Because scan lines engage a letter differently every time it's done. So he scanned a bunch of old birth certificates and used a different "t" each time.

The mistake was that many of the letters in the old files were from different typewriter styles and that's something he did not realize ... resulting in many typewritten letters on his forgery that did not match each other.

I hope this helps to explain what might have happened with this document.

Paul Irely

Every typewriter typed character is assigned a number in the order it is found in the document.

# EVIDENCE OF FORGERY

The two capital letters "A"s are from the word "BARACK" on the birth certificate found at section 8 of the form. There is only one letter between them. Why then is #144 significantly bigger than #146 if the same type-writer key struck both.?

Notice the other differences seen in the same word from different locations on the birth certificate. All the letters look different. Why?

The two capital letters "R" are from the same word "BARACK" as above and the other word "BARACK" in section 1 of the form. Why then is #3 significantly shorter and wider than #145 if the same typewriter key struck both? Note also the enclosed area in #145 is smaller than the enclosed area in #3 even though #145 is taller.

The two lower case letters "s" from the word "Hospital" in section 6c and "University" in section 12b are shown to be different because of the width of the letters. The lower case "s" #88 is wider than the lower case "s" in #198 as shown with the green and purple color bars shown under the letters.

The two numbers "2" are from "7:24" in section 5b and section 10 of the form. Why then is #40 significantly wider than #168? Notice also the difference in height of #168. Can you imagine how these two typewritten letters were typed with the same typewriter?

The two lower case letters "a" from the word "Male" found in section 2 and the word "Kapio" found in section 6c. Notice that the first "a" #23 is not as wide as #56. Also note the differences of the shape of the enclosed areas and the serifs at the top left of both.

The two lower case letters "i" from the word "University" in section 12b and "Kopio" in section 6c are shown to be different because of the dots over the letters. The dot in #199 is higher than that of #58 and shows more space over the letter. Also note the color bars indicating the difference in width between the letters.

The two capital letters "S" are from "HUSSEI" in section 8 and "STANLEY" in section 13 of the form. Why then is #151 significantly more narrow than #201? Notice also the serif differences indicated with the arrows showing that the serif on #151 is placed further back to the left on the "S" than as shown on #201.

The two lower case "n" letters are different in size. #62 found in section 6c is much shorter than #193 found in section 12b. This is a good place to insert a photo of a typewriter key to remind us that the impression is struck by an engraved letter that is steel and incapable of changing size.

Close up of a Typewriter Key flopped for clarity

The two lower case letters “e” #25 from the word “Male” found in section 2 and the word “Maternity” found in section 6c show us that #25 is from a different design of type style with a tilting horizontal bar and #25 is also bigger in size.

From Section 2

From Section 6c

The two lower case letters “u” from the word “Honolulu” #101 from section 6a and “Oahu” #105 from section 6b are shown to be different in width as indicated with the color bars above the letters. Also note the different design of the bottom part of the letters.

From Section 6a

From Section 6b

The two numbers “1” from the date “1961” #35 from section 5a and “18 Wichita” #225 from section 15 are shown to be different in width as indicated with the color bars below the letters. Also note the different design of the bottom part of the letters.

From Section 5a

From Section 15

The Word “Student” found in section 12a of the birth certificate was the first problem I noticed because it was one word with two variations of the letter “t” and was clearly a different drawing of the letter mainly displaying a different extension at the bottoms of those letters. As a typographer I could see no reason for a

different style of letter within the same word. Other examples on the page seem to suggest that perhaps the form was transferred to different departments to fill out different sections ... but that could not happen with one word. Later study showed that too many of the letters on the birth cert. did not match each other ... even for many typist.

Presentation & Report by Paul Irej - Typography and Type Face Expert. Copy courtesy of: ProtectOurLiberty.org

**If all the letters are from the same  
typewriter ... why don't  
they match? It appears that it  
was put together with letters from  
different sources  
and this means it's a forgery!**
